

PanoLite Lite Weight Plywood

Panoply Wood Products offers a unique lite weight panel by the name of Panoply LitePly. The Paulownia core panel is approximately 25% lighter than a Poplar veneer core of the same size and thickness. A thick 0.4mm Okume face and back are used so there is no core transfer. The calibrated core has poplar cross-bands under the face and back. The poplar cross-bands are used to insure the panel is stable and durable for multiple forms of lamination or lay-up. Panoply LitePly plywood is a premium lite weight panel with thickness tolerance of +/- 0.2mm

Panoply LitePly Specifications

Thickness	Size	Grade	Pcs / bundle	Glue	Weight
9mm	48.5"x96.5"	OVL/BTR	100	E0	26lbs
